Brainstorming & Ideation phase

Import Data using Transform Maps (Spreadsheet)

This SkillWallet micro project focuses on importing structured employee data from an external spreadsheet into the ServiceNow platform using Import Sets and Transform Maps. The spreadsheet is first loaded into an Import Set staging table. A Transform Map then maps source fields to the appropriate target-table fields, after which the transformation is executed and the target records are validated. The project also includes coalesce-based duplicate prevention and reporting/dashboard work.

1. Problem identification

- Manual entry of large amounts of employee data into a platform can be repetitive and can introduce data-entry mistakes.
- The project therefore explores a structured import workflow that reduces repeated manual entry and provides a repeatable transformation process.

2. Idea generation

- Use a spreadsheet as the external source because it is a common format for structured bulk data.
- Use an Import Set as a staging layer so raw incoming records can be reviewed before transformation.
- Use a Transform Map to define how source columns should become target-table fields.
- Use coalesce on an appropriate unique field to help prevent duplicate target records.
- Use reports and dashboards to make the result easier to inspect and present.

3. Selected concept

- The selected concept is an end-to-end spreadsheet import pipeline in ServiceNow. It combines data loading, field mapping, transformation, duplicate handling, validation, and reporting in one micro project.

4. Expected benefits

- More structured data migration.
- Clear separation between incoming data and final records.
- Reusable mapping logic.
- Better visibility into transformation results.
- A practical demonstration of ServiceNow administration and data-management concepts.

5. Future ideas

- Add more complex validation rules.

- Use scripted transformations for special data-cleaning requirements.
- Explore scheduled imports for recurring data sources.
- Expand dashboard reporting with additional project metrics.

Reference note: The technical descriptions of Import Sets, Transform Maps, field mapping, coalesce, transformation, and transform-history validation are aligned with ServiceNow developer/community guidance.
