Project planning phase

Import Data using Transform Maps (Spreadsheet)

This SkillWallet micro project focuses on importing structured employee data from an external spreadsheet into the ServiceNow platform using Import Sets and Transform Maps. The spreadsheet is first loaded into an Import Set staging table. A Transform Map then maps source fields to the appropriate target-table fields, after which the transformation is executed and the target records are validated. The project also includes coalesce-based duplicate prevention and reporting/dashboard work.

1. Project goal

- To demonstrate a complete spreadsheet-to-ServiceNow data import workflow using Import Sets and Transform Maps.

2. Planned milestones

- Milestone 1: Creation of Spreadsheet and Table.
- Milestone 2: Creation of Import Set Table and Transform Map.
- Milestone 3: Transform Data, Validate, and Enable Coalesce to Avoid Duplicate Records.
- Milestone 4: Creation of Reports and Dashboards.

3. Work sequence

- First prepare the source spreadsheet and decide the target data structure.
- Next load the spreadsheet into the staging area.
- Then configure the Transform Map and field mappings.
- After that run the transform, validate records, and configure coalesce.
- Finally prepare reports/dashboard views and demonstrate the complete workflow.

4. Time and resource planning

- The SkillWallet project workspace identifies the project as a medium-complexity micro project.
- The work requires access to a ServiceNow instance, the spreadsheet data, and the SkillWallet project instructions.
- The work is organized into milestone-based activities so that each stage can be verified independently.

5. Risk planning

- Incorrect source formatting can cause mapping problems.
- Incorrect field mappings can place values in the wrong target fields.

- Missing coalesce configuration can result in duplicate records.
- A successful transform status alone does not prove that the data is correct, so target-record validation is planned as a separate activity.

Reference note: The technical descriptions of Import Sets, Transform Maps, field mapping, coalesce, transformation, and transform-history validation are aligned with ServiceNow developer/community guidance.
